

- Crear DirFuncG curr_dir.push(DirFuncG)
- 2. Agregar a DirFuncG **id** (nombre y tipo nothing) y asociarle una tabla de variables vacía.

curr_func.push(id)

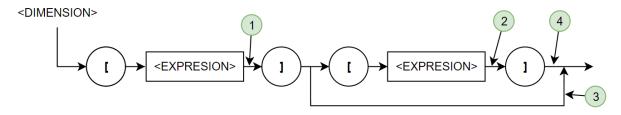

3. Eliminar toda la DirFuncG y las tablas de variables asociadas, curr_func.pop()

- Agregar id (tipo nothing) a curr_dir.top() y asociarle una tabla de variables vacía. curr_func.push(id)
 Generar un directorio de funciones DirFuncObj y asociarlo a curr_func.top() curr_dir.push(DirFuncObj)
- curr_dir.pop()curr_func.pop()

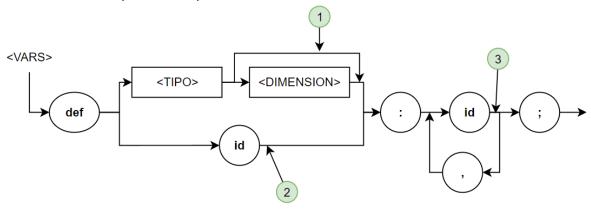

1. curr_tipo = tipo

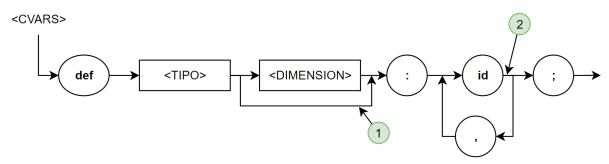

- 1. dim1 = POperandos.pop()
- 2. dim2 = POperandos.pop()
- 3. dimension = (dim1)

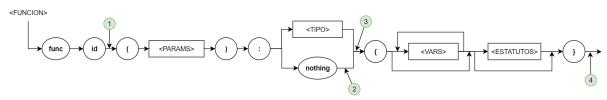

4. dimension = (dim1, dim2)

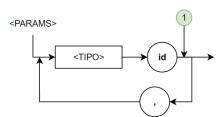

- 1. dimension = None
- 2. curr_tipo = id, dimension = None
- 3. Agregar variable id con curr_tipo y dimension a DirFunc[curr_func.top()]

- 1. dimension = None
- 2. Agregar variable id con curr_tipo y dimension a curr_dir.top()

- Agregar id a curr_dir.top() y asociarle tabla de variables vacía curr_func.push(id)
- 2. curr_tipo = nothing
- 3. Actualizar el tipo de curr_dir.top()[curr_func.top()] con curr_tipo
- Eliminar curr_func.top() de curr_dir.top() curr_func.pop()

1. Agregar id con el curr_tipo a curr_dir.top()[curr_func.top()]
